Mammalian organic FORM is implied.

The analysis of FORM (contour) Nature never uses full curves (convex or concave) & straight lines (nor angles) The line employed is an inflated curve (see line Graph 3.)

Out growings from a central axis – therefor actual concavities cannot exist.

+ + + +

No 1

Has the appearance of True FORM as No 2

Here concavities are deliberately employed at points marked – Thus + •

The line becomes 'tight' in character with lack of Solidity in the form but the 'Aesthetic' qualities become evident.

No 2

Note its fundimental accuracy.

Rectified Head

Constant Rectification is the key stone of draughtsmanship.

Lecture to students: 'Line' used by Nature (No line exists – therefor it is to a certain extent genetic.

Line Graph

1 2 3

Expressing dynamic & Static.

Three segments of circles – No 1 seldom used – No 2 never used – No 3 mainly used by Nature in the structure of FORM.

A straight line does not exist – there for "A straight line is a segment of an infinite arc." Thus a square may be enveloped mathematically from full curves – Thus: or a circle may be enveloped by the same process from straight lines – see lecture on 'Space anatomy'.

There are four types of line which artists may employ to express contour e.g.

The Exact line – (quite impossible)
" Tight " (occurs through ignorance)
" Loose " " " pretentiousness
Free " (" " knowledge)

No line can be so sharply defined – Through overlapping Thus every contour has certain small knowledge of something etc.

Illustration

Centre

Red – Tight
Blue Free
Yellow Loose
Black Exact

NB The Red is 'mean' or an understatement The yellow – bad because it is an inaccurate approximation Blue is best – because it is a generous and accurate approximation

Neck contours

(Nodal) points where changes occur marked Thus – •

The apprehension & appreciation of proportion is the foundation of draughtsmanship.

Showing the manner in which the most difficult & complex contour may be drawn accurately by rectification.

Showing the unaffected curve that exists even in apparently straight lines.

Slightly exaggerated drawing of lines which are simply from an arc.

No 3

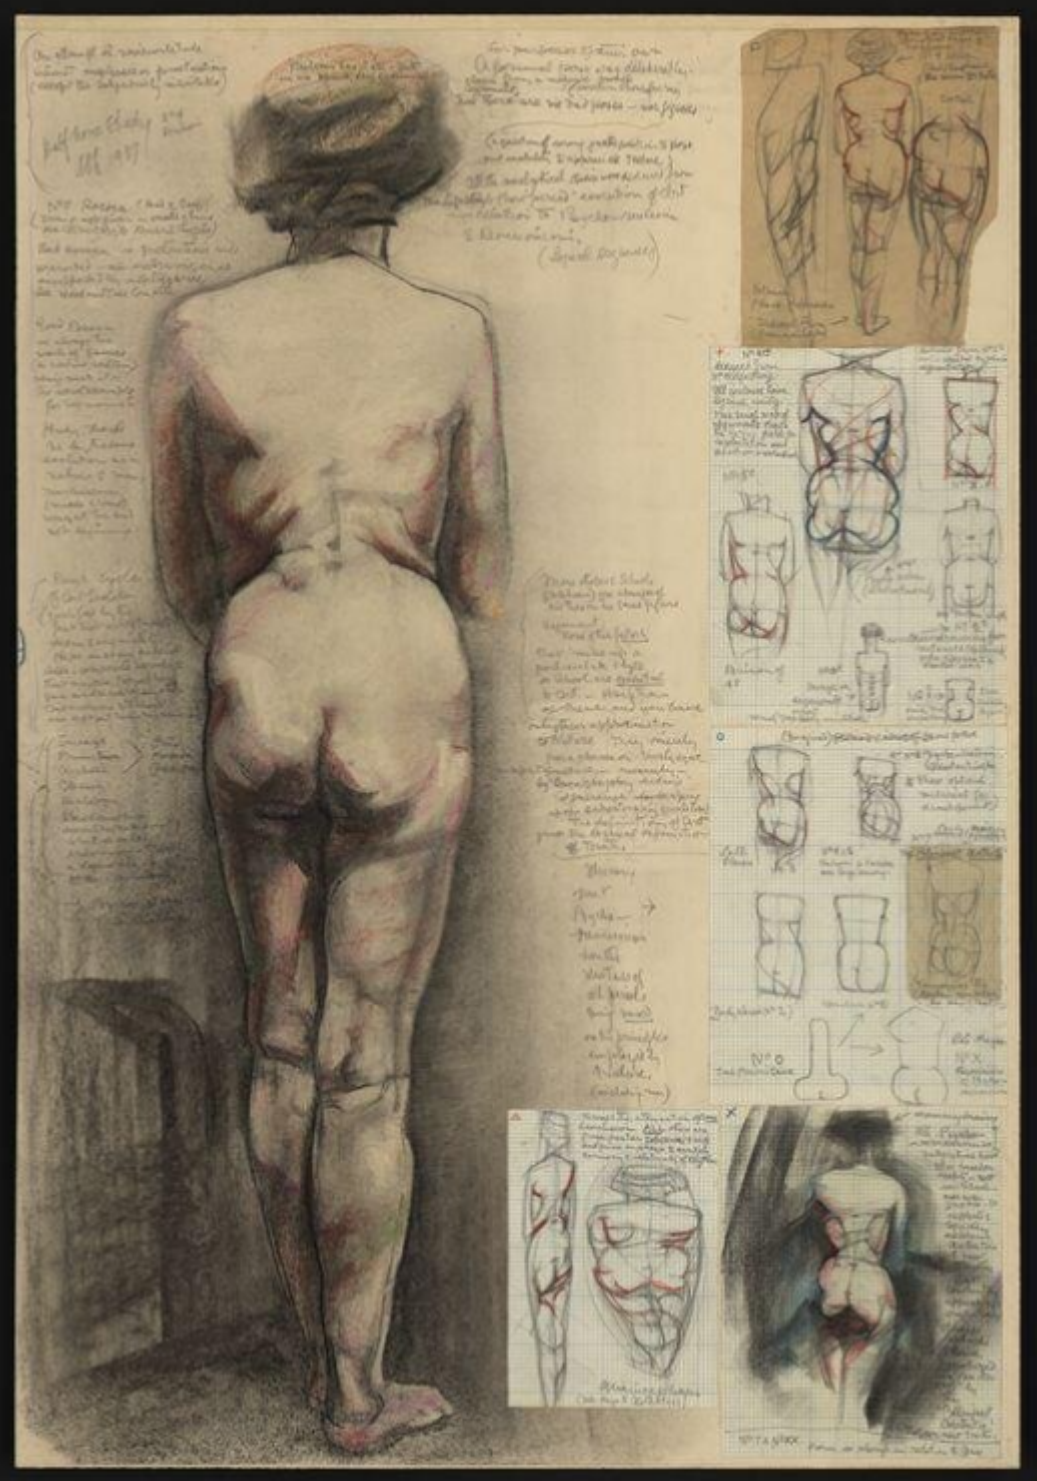
The 'Aesthetics' are four – secondary or minor Aesthetics are called 'Harmonics' (See lecture on Aesthetics)

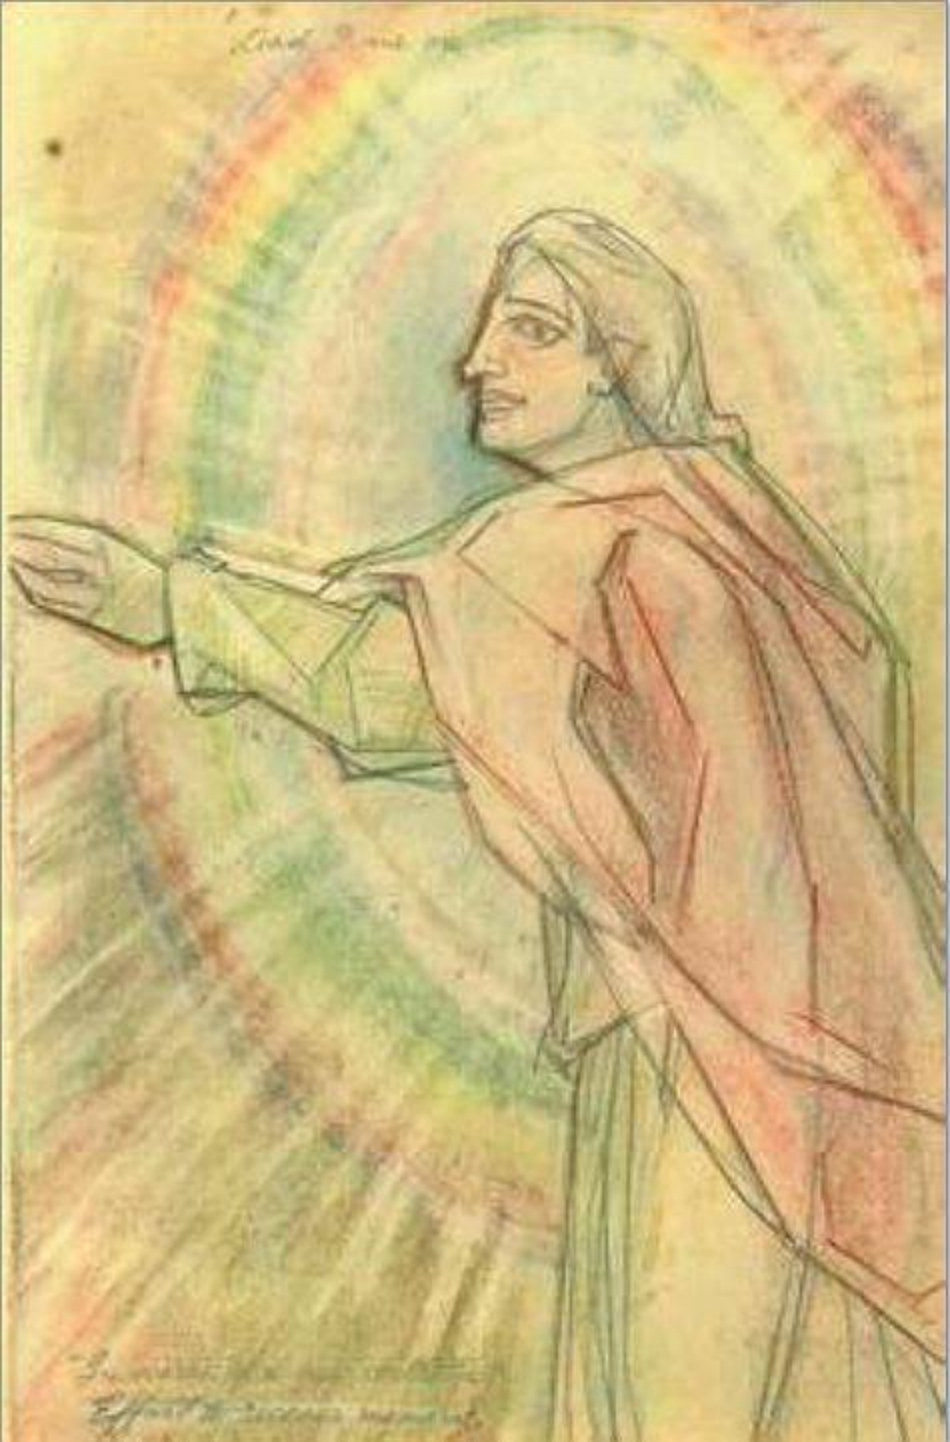
Rough 'Aesthetic' analysis. The 'Dominant Aesthetic' in Red & Fundimental in Blue

NB. Note that each of the four heads may be regarded as 'good ART' because each are fundimentally true to facts relating to organic FORM. Believe it or not; Every stamp ultimately conforms to logic and Truth. Wisdom only is Eternal – 'Psycho-recessivism' is dead.

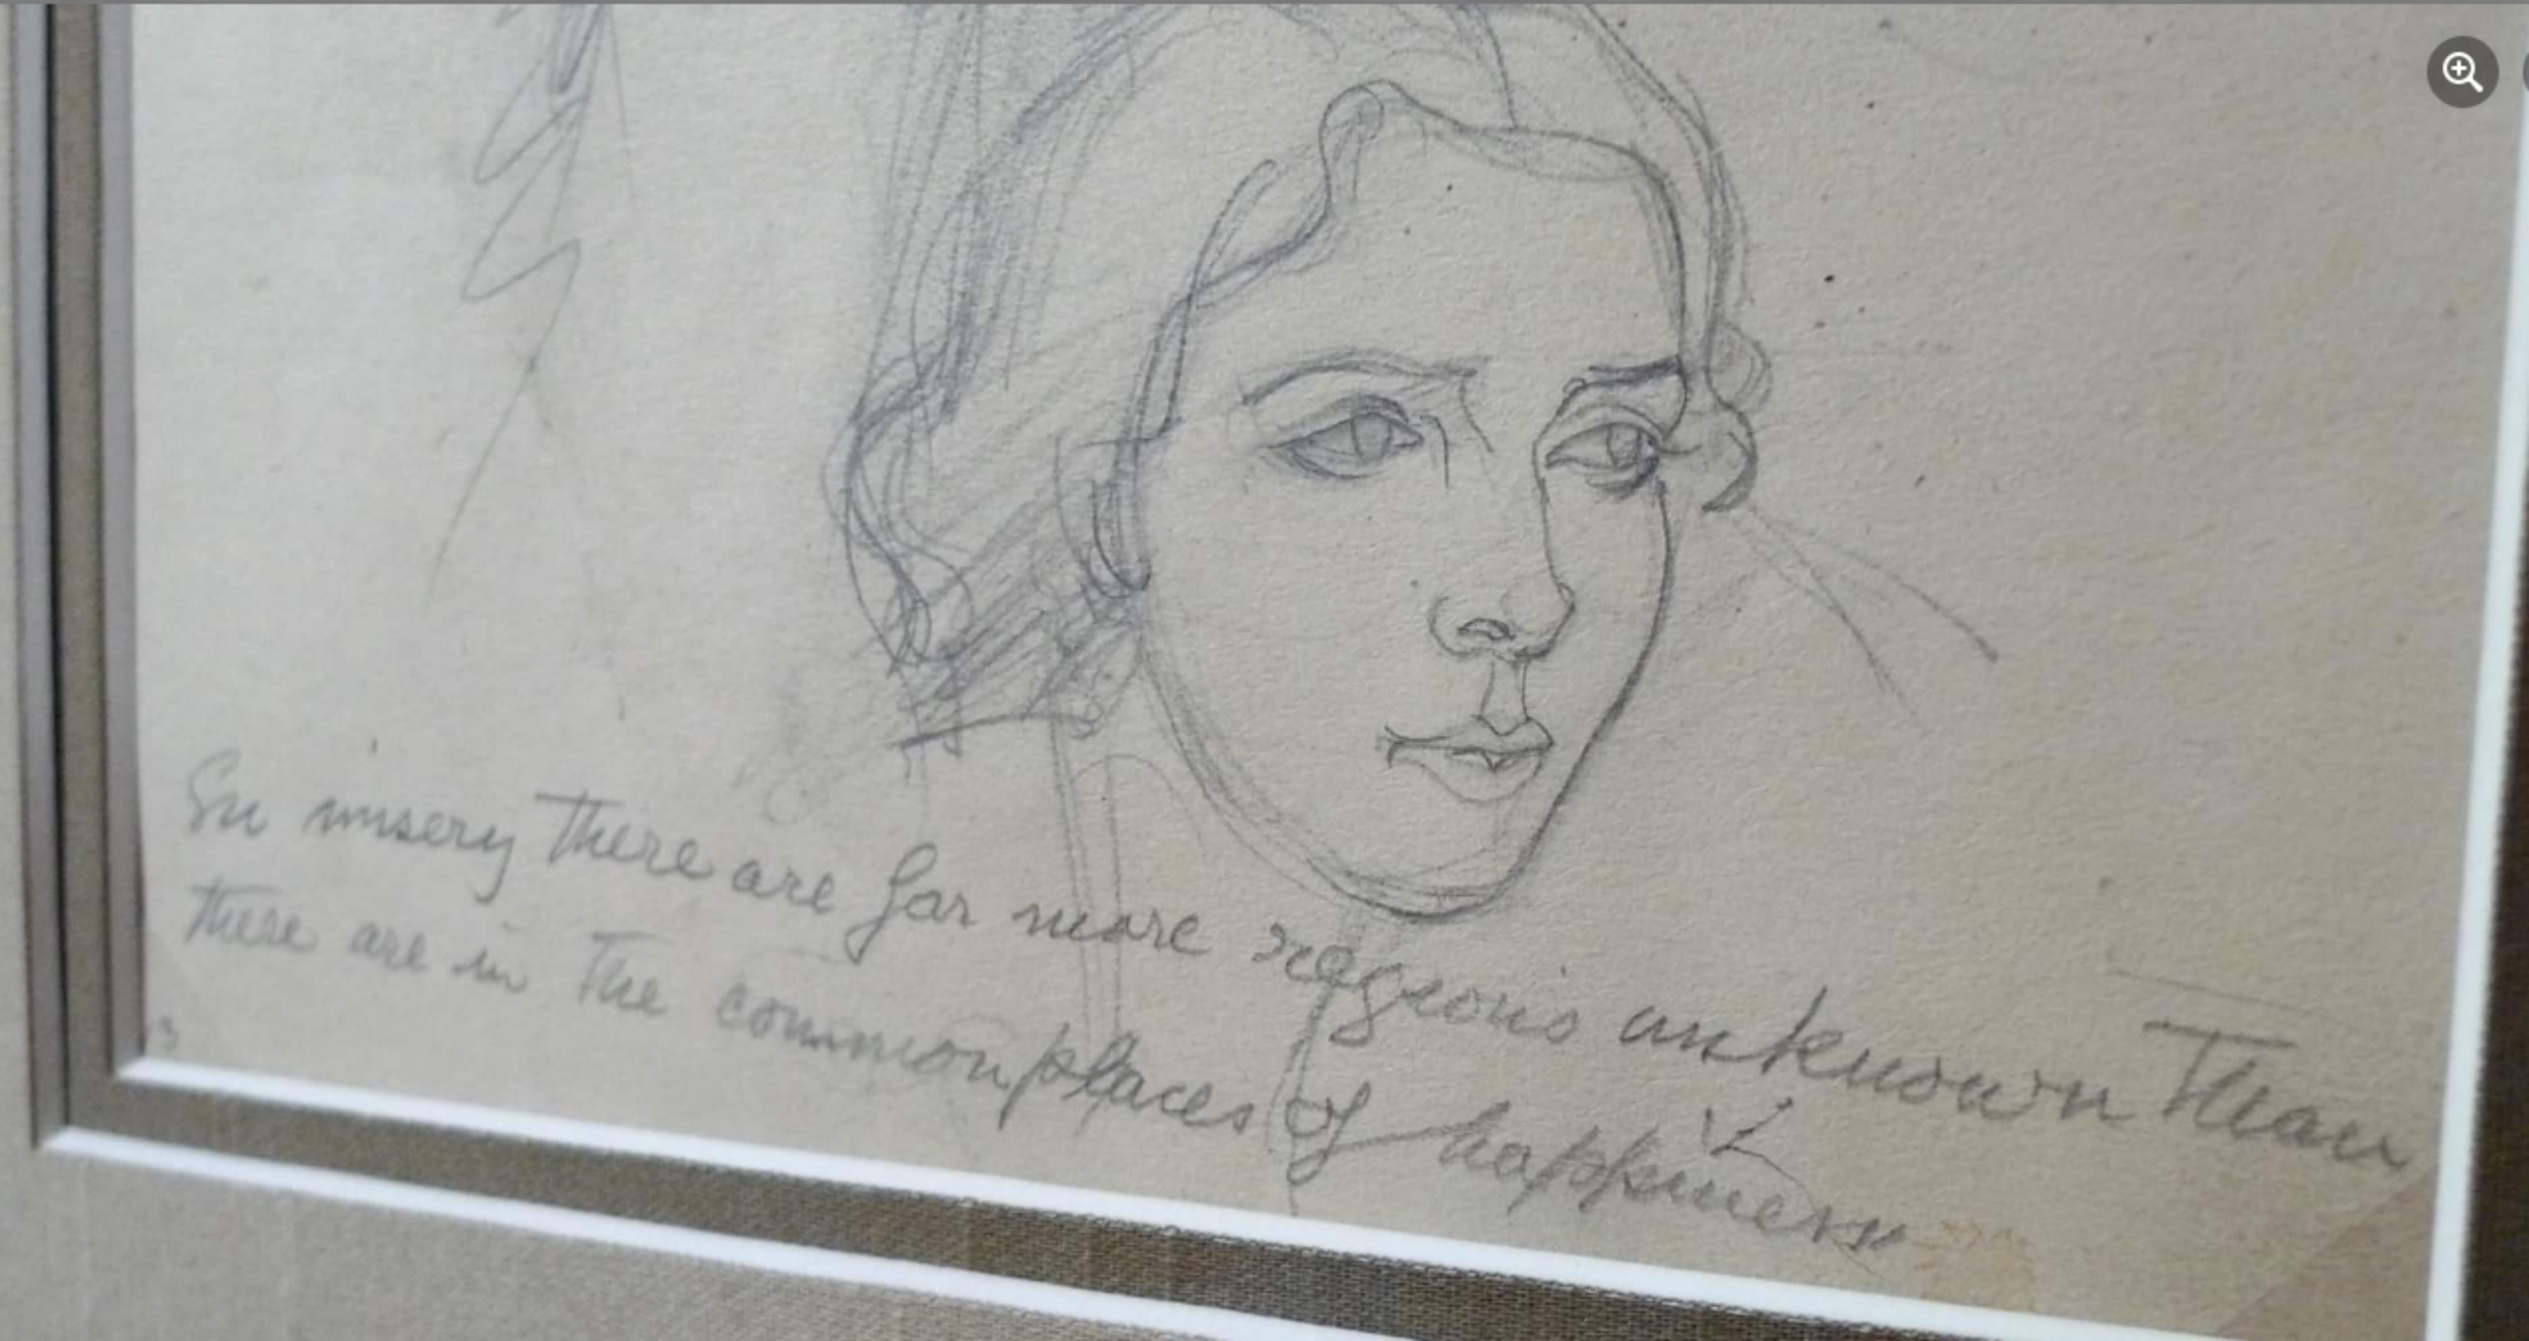
Learn NB Form Stamps First.

Bone & Muscle anatomy are left out. And Form is the last letter in the 'Art Alphabet' of knowledge of the Skull as regards – See Anatomy Lecture





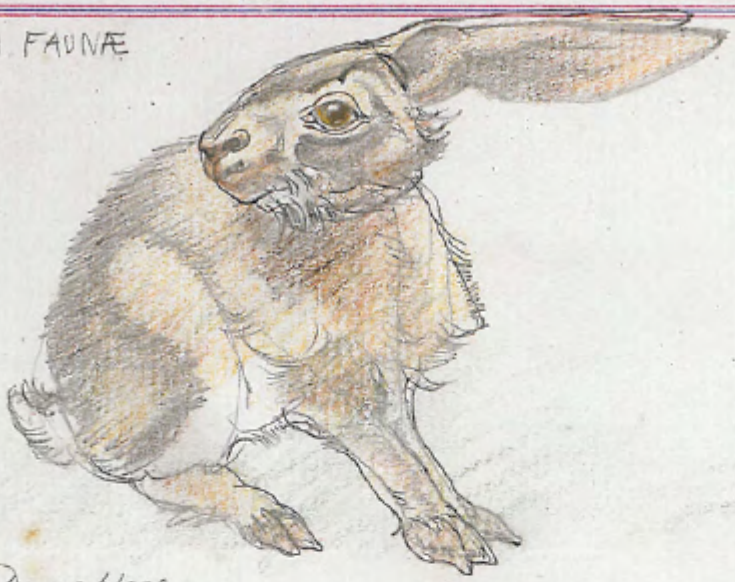
In misery there are far more regrets and known than
there are in the commonplaces of happiness



So misery there are far more regrets unknown than
there are in the commonplaces of happiness

Beleeue me – all is True
or Natural History of Downe.
Aos, (Fecit)

PART. I. FAUNÆ.



No 1

Downe Hare

This species differs from Hares (Lepus europæus occidentalis) in that the feet are have cloven hoofs. Their eyes are luminous & flecked gold always open. Colour – grizzled yellow ochre, as in the Irish Hare. It is found over a great part of the South Downs of Kent & was apparently introduced by Mr Darwin from Patagonia. When caught gives forth a [illegible] laugh and still more bright [illegible] followed by [illegible]

Water Shrew.

No 2.

A large semi-aquatic shrew distinguished by its blue colouration pink human, carp's hands & yellow bird-like feet. Further. – it has 140 Teeth. It swims & dives with the facility of Nymphe, unlike other [illegible] creatures – bends its [illegible] & leaping & boring [illegible]
Mon multa – sed multum.

Master

Morning prayer; Adonai

O Lord, if I have not discovered Thee in the mighty architecture of Nature, it is because Thou art remote within me. Can I feel Thee in my every vibration, in the passions that rise consuming my attention entire? O Thou Greater One! Let Thy light Nature in my darkness that I may not reflect it but see Thee everywhere. Let all Nature speak of Thee - let me not be deaf to Thy

Portrait of Tricia

Nature is indifferent to our greatest offences
for ultimately we are subject to our own justice.

At no time in my life have I been a person
to hide myself pollute by the touch, substitute
approach of any creature other than those who were
human shape.

Nothing should hurt us that is our own nature
we always walk towards ourselves.

Observation is blind without attachment – he is most who searches for his preconceptions.

In misery there are far more righteous unknown than there are in the commonplaces of happiness

Sacrifice is the first word of love,

We are not allowed to love God other than through man.

Life for Art's sake,

Live christ for others when you are
incomplete yourself.
selfishness leadeth one into others

. The evil in us is ever intolerant of the
17 good within others.

Love Lee sweet

The greatest miracle of God is that of giving us occasion of love in one person what we should have for all.

We cannot love our neighbours ourselves but we can talk ourselves in our neighbours

VICTRIX
